

SUPPLEMENTAL TABLE 2. HCMV, EBV, HPV16 and HPV18 infection in different types of lung adenocarcinoma samples.

		HCMV positive	EBV positive	HPV16 positive	HPV18 positive
Lung adenocarcinoma samples with <i>EGFR</i> gene mutations‡	Liquid samples n = 16	8	11	3	10
	Non-liquid samples n = 18	9	15	7	13
Lung adenocarcinoma samples without <i>EGFR</i> gene mutations	Liquid samples n = 15	0	4	1	1
	Non-liquid samples n = 18	1	2	2	0

HCMV – human cytomegalovirus; EBV – Epstein-Barr virus; HPV16 – human papillomavirus type 16; HPV18 - human papillomavirus type 18.

‡All samples of lung adenocarcinoma patients with *EGFR* gene mutations were positive for more than one analyzed virus.
